

STRIKEOUT™

LAKE AND POND COLORANT

ACTIVE INGREDIENTS:

Dye, Coupling Agents & Inert Ingredients100%

CAUTION

KEEP OUT OF REACH OF CHILDREN

**Avoid contact with skin, eyes, and clothing.
Do not take internally.**

GENERAL INFORMATION

TRI-CARD STRIKEOUT is a flexible, concentrated formulation, that is a non-toxic water colorant.

TRI-CARD STRIKEOUT creates a beautiful natural appearance for your lake and pond. This product is an excellent complement to the already existing beauty of golf courses and park fountains.

APPLICATION RATES

TRI-CARD STRIKEOUT should be applied one (1) gallon of dye per acre/foot of water with an average water depth of four (4) feet. One (1) ounce treats approximately 8500 gallons of water for small ponds. An acre/foot of water can be determined using the following formula: Pond Length (ft) x Pond Width (ft) x Average Depth (ft) = Acre-Feet of Water 43,560 ft²

After calculating the acre/feet of water, pour the appropriate quantity of dye into the water along the edge of the lake or pond. **TRI-CARD STRIKEOUT** will diffuse evenly, dispersing with lake and pond currents and normal water movement. To assist diffusion throughout the entire lake or pond, empty the gallon container(s) at different points around the lake or pond edge or through an aerator, circulation or injection system, waterfall or fountain. Wear eye protection and rubber gloves, carefully applying the dye directly to the water.

TRI-CARD STRIKEOUT is safe to fish and aquatic species, water fowl, wildlife and pets. It is a non-corrosive dye and when used according to recommended rates will not stain stone, fountains, approved aquatic features or swim wear. The dye will stain rocks, decking and other porous surfaces if spilled or applied as a concentrate.

TRI-CARD STRIKEOUT is a high quality aquatic dye that will be oxidized and degraded by chlorine, which will diminish dye concentration and lake or pond coloration. In non-chlorinated systems or lakes and ponds, dye is broken down gradually through biological and photo degradation. Coloration is also

reduced through the natural process of dilution (i.e. – addition of fresh water to the lake or pond). The original color level should be effective for 2-4 weeks, depending on your lake or pond system. Chlorinated systems typically require dye addition within 2 weeks while biological and photo degradation is common within 4 weeks. To return your beautiful lake or pond color to its intended coloration level, simply add small amounts of **TRI-CARD STRIKEOUT** from time to time. This will offset the chlorination or natural bleaching that occurs in every dyed lake or pond environment.

STATEMENT OF PRACTICAL TREATMENT

If Inhaled: Remove to fresh air. Treat symptomatically.

If on Skin: Flush with water and mild soap until removed.

If in Eyes: Flush with water for 25 minutes. If irritation persists, contact a physician.

If Ingested: Do not induce vomiting. Give two glasses of water. See physician if symptoms persists.

PRECAUTIONARY STATEMENT

Do not use in water that is expected to be consumed by humans. **TRI-CARD STRIKEOUT** is safe for swimming after complete dispersal. Use **TRI-CARD STRIKEOUT** only in water bodies that have restricted flow.

STORAGE AND DISPOSAL

Do not reuse empty container. Triple rinse and offer for recycling or disposal of in accordance with Local, State and Federal regulations. Store above 32°F to prevent freezing.

WARRANTY

Seller warrants that this product conforms to its chemical description and is reasonably fit for the purpose stated on the label when used in accordance with directions under normal conditions of use, but neither this warranty nor any other warranty of merchantability or fitness for a particular purpose, expressed or implied, extends to the use of this product contrary to label instructions, or under abnormal conditions, or under conditions not reasonably foreseeable to the seller, and buyer assumes the risk or any such use.
