

STRIKEOUT™

LAKE AND POND COLORANT

STRIKEOUT is a flexible, concentrated aqua formulation that is a non-toxic water colorant. It creates a beautiful natural appearance for your lake and pond. This product is an excellent compliment to the already existing beauty of golf courses and park fountains.

STRIKEOUT is safe to fish and aquatic species, water fowl, wildlife and pets. It is a non-corrosive dye. The dye will stain rocks, decking and other porous surfaces if spilled or applied as a concentrate.

The original color level should be effective for 2 - 4 weeks, depending on the lake or pond system. Chlorine will diminish dye concentration in non-chlorine systems, dye will break down gradually through biological and photo degradation.

Do not use in water expected to be consumed by humans.

Consult label for other precautionary statements.

APPLICATION OR USE RATES

STRIKEOUT should be applied one (1) gallon of dye per acre of water, with an average water depth of four (4) feet. One (1) ounce treats approximately (8500) gallons of water for small ponds.

An acre/foot of water can be determined using the following formula:

Pond Length (ft) x Pond Width (ft) x Average Depth (ft) = Acre-Feet of Water 43,560 ft²

After calculating the acre/feet of water, pour the appropriate quantity of dye into the water along the edge of the lake or pond. **STRIKEOUT** will diffuse evenly, dispersing with lake and pond currents and normal water movement. To assist diffusion throughout the entire lake or pond, empty the gallon container(s) at different points around the lake or pond edge or through an aerator, circulation or injection system, waterfall or fountain. Wear eye protection and rubber gloves, carefully applying the dye directly to the water.
