DIRECTIONS FOR USE

WC-12 is a water conditioning agent. It reduces the pH of the water solution and sequesters many dissolved mineral ions that tend to tie up or reduce the effectiveness of some herbicides.

In addition, WC-12 can be used as a tool to increase the ability to tank mix certain products and keep them in more of a uniform solution.

WC-12 is compatible with many pesticides and fertilizers. Perform a jar test to check compatibility prior to mixing large quantities. Confirm compatibility with auxin herbicides such as 2,4-D before mixing with water or fertilizers due to local mixing uses. Dicamba should be tested for compatibility with WC-12 and to insure mixture does not increase volatility of dicamba herbicide.

Follow herbicide and pesticide label recommendations when using WC-12.

Read and follow all directions on this label prior to use.

Do not mix with AMS.

Perform a jar test to check compatibility with other products prior to mixing.

MIXING INSTRUCTIONS

1. Add total volume of water or fertilizer to tank and turn on agitation.
2. Add required amount of WC-12.
3. Add any other pesticide to the tank.
4. Fill tank with balance of water or fertilizer while maintaining agitation.
5. Agitate adequately for uniformity of solution before applying.

RECOMMENDED RATES

Always add WC-12 to spray water solution first to condition the water.

Use Rate: ¼% - 1% v/v based on water hardness

Use the higher rates in water hardness above 500ppm.
